WO 2005/114121 PCT/US2005/012730

## **CLAIMS**

What is claimed is:

- 1. A calorimetric device comprising
- a) a U-shaped reaction vessel having an inlet and an outlet, and mounted onto a support at or near the inlet and the outlet; and
  - b) a sensor.
- 2. The device of claim 1, wherein the sensor detects temperature input into the reaction vessel and/or temperature output from the vessel required to maintain the reaction vessel at a substantially constant temperature.
- 3. The device of claim 1, further comprising a coating layer on the reaction vessel, wherein the coating layer provides for mechanical bending of the reaction vessel in response to a temperature change within the reaction vessel.
- 4. The device of claim 1, further comprising a coating layer on the reaction vessel, wherein the coating layer provides a means of detecting a change in electrical properties of the coating layer in response to a temperature change within the reaction vessel.
- 5. The device of claim 1, further comprising a reflector mounted onto the reaction vessel.
- 6. The device of claim 1, wherein the device detects temperature changes in the range of from about 1 pJ to about 1000 pJ.
- 7. The device of claim 1, wherein the reaction vessel has a total volume capacity in a range of from about 1 μl to about 1 ml.
- 8. The device of claim 1, wherein the reaction vessel comprises a sensor layer that detects a temperature change in the vessel.
- 9. The device of claim 8, wherein the sensor layer is selected from a thermistor, a piezoelectric material, and a piezoresistive material.

WO 2005/114121 PCT/US2005/012730

10. The device of claim 1, wherein the reaction vessel is embedded in a micromechanical cantilever.

- 11. The device of claim 10, wherein the reaction vessel is enclosed in a vacuum.
- 12. An array comprising a plurality of the device of claim 1.
- 13. The array of claim 12, further comprising a data storage means.
- 14. The array of claim 12, further comprising a data analysis means.
- 15. A method of detecting a temperature change that occurs in a process, the method comprising

introducing a sample comprising a chemical reactant, a biological entity, or a macromolecule into the device of claim 1; and

detecting a temperature change in the reaction vessel.

- 16. The method of claim 15, wherein the process is selected from a chemical reaction, a biochemical reaction, a binding reaction, a physical process, a light-induced process, and a biological reaction.
- 17. The method of claim 15, wherein the device comprises a reflector mounted on the reaction vessel, and wherein said detecting comprises detecting a light beam reflected from the reflector.
- 18. The method of claim 17, wherein the detecting is by a charged coupled device.
- 19. The method of claim 15, wherein said detecting comprises detecting bending of the reaction vessel.
  - 20. The method of claim 19, wherein said detecting is by a capacitor.
